Works in a Group	
<ul style="list-style-type: none"> - Our team worked together to design the trebuchet. I participated in the group. - I prefer to work alone, but there was too much to do and the others had really good ideas. - It really took a team effort from the initial ideas to the building of the machine. - We had a number of options, but eventually decided on one. - I wanted to build my own idea right away, but as the other ideas were explained, I could see others had very good ideas too! 	
Leads	
<ul style="list-style-type: none"> - I didn't mind explaining my ideas to get the team started. - I liked my ideas, but parts of my design were not as good as others. - I encouraged others to explain their parts. - Sometimes we were discouraged. I kept telling everyone we can do it. I helped others on our team. 	
Resolves Conflicts	
<ul style="list-style-type: none"> - When the trebuchets didn't throw the boulder (golf ball) far enough, we were very discouraged and argued a lot. We had to listen to everyone's ideas. I called a team meeting to talk about the various ideas. - Eventually a combination of ideas worked. I thought making the arm lighter was the answer. It wasn't, but it did help. 	
Contributes to a Team	
<ul style="list-style-type: none"> - I wrote out what everyone had to do and when. I needed to be more specific in this area. - The team encouraged everyone to say their piece. - We weren't very patient at the beginning. Later on we needed ideas that worked. We were getting desperate. Time was running out.
